## 1. Welcome from your Teaching Team

On behalf of the teaching team, I am delighted to welcome you onto the Masters Programme in Forensic Psychology. The Cardiff School of Sport and Health Sciences carries out teaching and research in a large number of different areas of applied psychology. We also have excellent collaborations with Her Majesty's Prison and Probation Services (HMPPS) in Wales and many other local forensic settings. You will be able to draw upon these areas of expertise during the taught element of the programme and for your research dissertation.

There are two main themes to the research in the Psychology Department, health and forensic. The Forensic Psychology teaching team has particular expertise in offender motivation, cognitive skills of offenders, forensic mental health, violence, aggression and addiction.

This booklet is intended as an introduction to Cardiff Metropolitan University, the Cardiff School of Sport and Health Sciences, the Applied Psychology Department and the Masters programme. Your **student handbook** and the **Induction Day Programme** will provide you with more detail and I am your first point of contact if you need any further information or advice.

The Induction Programme will be added to the end of this booklet in due course but will take place on Thursday 19th September and Friday 20th September 2019.

Thank you for choosing to study with Cardiff Metropolitan University and I look forward to meeting you in person in September 2019.

Best wishes

**Daniel Heggs** 

Head of Applied Psychology Department

## **Educational Aims of the Programme**

Forensic Psychology is the practice and application of psychological research relevant to crime, policing, the courts, the criminal and civil justice system, offenders, prison, secure settings, offender management, health and academic settings as well as private practice. It is an area of applied psychology, and, as such, draws on many aspects of other applied disciplines such as occupational, clinical, health and cognitive psychology.

The discipline of Forensic Psychology examines the roles of environmental, psychosocial, and sociocultural factors that may contribute to crime or its prevention. Specifically, the aim of Forensic Psychology as an academic discipline is to develop and refine social, cognitive and behavioral methods used in the assessment, treatment, or rehabilitation of individuals in the criminal justice system; and techniques that could reduce risk of re-offending by modifying attitudes, behaviours and/or mental health.

The first aim of the programme is to provide students with a thorough and critical academic grounding in the evidence relating to environmental, cultural, cognitive and biological factors that may contribute to a wide variety of forms of offending. The programme will encourage students to consider the role and limitations of causal explanations for offending in the development of offender interventions, services and policy.

The second aim of the programme is to introduce students to the basic professional competencies for working in the many settings where forensic psychology is practiced, including skills related to inter- disciplinary working, risk assessment, ethics, continuing professional development, report writing and differences in practice when working with offenders, victims, the courts and the police.

The programme aims to produce Master's degree graduates with the ability to understand the limitations of the conceptual underpinnings of interventions and assessments used in forensic psychology and who are able therefore to engage in critical evaluation of the evidence base upon which their own practice will eventually be based. Because the programme will specifically avoid providing any formal supervised practice, its aim is to produce reflective scientist-practitioners who will be ready to engage with the final element (stage 2) of the training requirements for becoming a Registered Forensic Psychologist

### **Programme Structure**

The programme is structured within a modular format and the taught component comprises 7 modules.

There are three 20 credit modules, four 10 credit modules (one of these is part 1 of the dissertation where 10 credits are awarded for successful research plan and ethics proposals), one 30 credit research methods module and the dissertation is awarded 50 credits. Taught elements of the programme extend over two academic years for the part-time route and one academic year for the full time route. In addition to that the dissertation involves independent, supervised research. All modules are core and no optional modules are currently on offer. Table 1 illustrates the modules and their credit values.

In line with BPS standards, all students enrolling on the programme from 2019/20 will need to pass all modules at a minimum pass mark of 50% in order to be eligible for a BPS accredited award.

Table 1: Module descriptions for taught modules

Module title	Brief description
Forensic Mental Health	This module aims to provide students with a critical examination of
(20 credits)	the relationship between mental illness, personality disorder,
	learning disability and criminal behaviour. The module will
	encourage students to view the mental health needs of offenders in
	the broadest possible context and to appreciate the inter-disciplinary
	nature of services available to mentally disordered offenders,
	difficulties in accessing those services and problems for custodial
	adjustment presented by specific psychiatric diagnoses.
Theories of Criminal Behaviour	The module aims to examine the contribution made by biological,
(10 credits)	psychodynamic, evolutionary, cognitive and socio-cultural
	perspectives to our understanding of the aetiology of criminal
	behaviour. The primary aim of the module is to provide a critical
	examination of the dominant theories of crime.
Professional Practice and	The focus of this module is the professional practice of forensic
Offender Management	psychology. The module builds on the groundwork laid by earlier
(20 credits)	modules and covers professional skills and the types of interventions
	that a practicing forensic psychologist may engage in. The topics
	covered by this module include ethics, report writing, working with
	other agencies, and working with offenders and victims.
Psychological	This module focuses on different models of offender rehabilitation
Assessment and	and assessments and interventions used across a number of
Interventions	contexts. A range of topics will be covered demonstrating the broad
(20 credits)	application of psychology to offender rehabilitation in the Criminal
	Justice System. These topics include: (1) assessment of risk and
	treatment need and protective factors; (2) interventions for a range
Legal Psychology (10	This module covers psychology as it may be applied to the law, and
credits)	the central focus of the module is evidence. A range of topics will be
	covered, demonstrating the broad application of psychology within
	the legal system. These topics include the interviewing of suspects
	and witnesses, vulnerable victims, offender profiling and deception
	detection.
Addiction and	This module informs students about different factors that may
Psychological	contribute to psychological vulnerability in offenders and victims. A
Vulnerabilities (10	variety of topics will be covered, including issues around the concept
credits)	of vulnerability and the protection of vulnerable adults, including
	factors which may increase a prisoner's vulnerability (e.g. youth,
	learning disability, older prisoners, and women).
Research Methods and	The aim of this module is to extend students' knowledge and
Design (30 credits)	experience of quantitative & qualitative research methods. Topics
	include: randomised control trials, ANOVA, ANCOVA, MANOVA,
	Power analysis, Regression, Non parametric methods, interviews,
	discourse analysis, grounded theory, reflective analysis and
	psychometric evaluation.

### **Programme Study Time**

A student's study time is broken into three elements: class contact, directed study and independent study. Class contact time is normally made up of lectures, seminars, practical classes and tutorials. Each module is delivered across the academic year for a set number of hours per week. This makes up the students' class contact time.

Directed study time is defined as time where the students prepare for forthcoming lectures, plan seminar deliveries and read relevant research literature that is directed by the module tutor(s).

When appropriate, independent study time includes time when the students engage in additional problem-solving or research based activities that are related to a given module but where the activities are not directed by the module tutor(s). This includes all work towards assessments.

#### Modes of attendance

Timetables will be given out during the induction day on **Thursday 19th September 2019**. Full-time students will be expected to attend Cardiff Metropolitan University **2 days a week on a Thursday and a Friday**. Part-time students will be expected to attend Cardiff Metropolitan University for one day per week, on Thursdays during year 1 of their study and on Fridays during year 2 of their study

## 2. Enrolment / Student MetCard Collection

Enrolment is an essential process that confirms your status as a Cardiff Met student and also gives you access to Cardiff Met IT systems, payment of fees, and, importantly, enables you to obtain your Student MetCard.

You can complete the online Self-Enrolment process from any computer through the Cardiff Met Self Service system once you have received your **Enrolment Email**.

On receipt of your Enrolment Email, please begin your Self-Enrolment by going to the <a href="www.cardiffmet.ac.uk/enrolment">www.cardiffmet.ac.uk/enrolment</a> webpage and following the step-by-step guidance provided. Access to the Enrolment section of the Cardiff Met Self Service system will require you to login with a username and password. Please input the same username and password you originally used to apply with. Guidance is provided for forgotten usernames/passwords. Please note that in order to Self-Enrol, your status with Cardiff Met must be Unconditional Firm (UF) i.e. all conditions met and place accepted.

You will be able to obtain your University Identification Card during the Induction programme.

## 3. Useful links

- Academic Handbook
- Accommodation

#### Additional Costs

Additional costs are any mandatory or optional expenses, in addition to tuition fees, that need to be paid for by students to fully participate and complete their studies.

## Admissions Policy

## • Bike Shelters

Once you are on campus and have collected your student ID card you will be able to request access to the various bike shelters around our campuses.

- Campus Maps & Met Rider
- Cardiff Met News
- Cardiff Met Sport & Facilities
- <u>Cardiff Met SU</u> including Freshers information & wristbands

### Occupational Health

To comply with current Health & Safety legislation, all Cardiff Met students undertaking a healthcare-related programme at Cardiff School of Sport & Health Sciences (involving a clinical placement component), are required to participate in a mandatory Occupational Health Screening assessment. Additionally, certain courses are also required to adhere to the Department of Health's immunisation and vaccination programme.

## • Student Finance

For information on tuition fees, alumni discount, loans and scholarships, as well as contact information for the Student Finance Advisory Service.

# Student Handbook

#### Student Services

For help during your time with us in relation to your health, welfare, lifestyle and future career. The aim is to provide you with all the support you need to ensure your studies are as enjoyable and successful as possible. Services also include counselling, disability and chaplaincy.
